Subject guide to volume 55

General methods in microscopy
Holography
Exit wave reconstruction
Three-dimensional reconstruction and stereo microscopy
Electron diffraction
Convergent beam electron diffraction (CBED)
Scanning transmission electron microscopy (STEM)
Reflection electron microscopy (REM) and reflection high energy electron diffraction (RHEED)
Electron energy loss spectroscopy (EELS)
Energy-filtered imaging and diffraction
X-ray microanalysis
Scanning electron microscopy (SEM)
Low energy electron microscopy and diffraction (LEEM and LEED)
Scanning tunneling microscopy (STM)

Specimen-related methods
Specimen preparation and handling
Microscopic methods, specifically for biological specimens
Microscopic methods, specifically for solid interfaces and multilayers
Microscopic methods, specifically for surfaces
Cryomicroscopic methods
Radiation effects (experimental)

Tools
Electron microscope design and characterization
Instrument control and alignment
Image detectors
Image processing

Theories
Particle optics
Electron diffraction and elastic scattering theory, image simulation
Inelastic electron scattering theory
Contrast transfer theory

Miscellaneous subjects
Editorials, Announcements, Comments, Reports, Historical notes

Coma-free alignment of a high-resolution electron microscope with three-fold astigmatism, *Ishizuka* 55 (1994) 407
Three-fold astigmatism in high-resolution transmission electron microscopy, *Krivanek* 55 (1994) 419

Energy-filtered imaging and diffraction
Detection limits in elemental distribution images produced by energy filtering TEM: case study of grain boundaries in Si_3N_4, *Berger, Mayer and Kohl* 55 (1994) 101
Benefits of energy filtering for advanced convergent beam electron diffraction patterns, *Burgess, Preston, Botton, Zaluzec and Humphreys* 55 (1994) 276

Exit wave reconstruction
What is the focus variation method? Is it new? Is it direct?, *Saxton* 55 (1994) 171
Aberration correction using off-axis holography. II. Beyond the Scherzer limit, *Ishizuka, Tanji, Tonomura, Ohno and Murayama* 55 (1994) 197

Holography
A report on speckle and coherent diffraction phenomena in selected-area transmission electron diffraction patterns, *Daykin* 55 (1994) 121
Aberration correction using off-axis holography. II. Beyond the Scherzer limit, *Ishizuka, Tanji, Tonomura, Ohno and Murayama* 55 (1994) 197
Principle and application of phase-shifting electron holography, *Ru, Lai, Aoyama, Endo and Tonomura* 55 (1994) 209

Image detectors
Performance of thin foil scintillating screen for transmission electron microscopy, *Fan, Dunkelberger and Ellisman* 55 (1994) 7
A new quasi-confocal image plate scanner with improved spatial resolution and ideal detection efficiency, *Burmester, Braun and Schröder* 55 (1994) 55
Density correction of photographic material for further image processing in electron microscopy, *Völkl, Lenz, Fu and Lichte* 55 (1994) 75

Image processing
Digital analysis of Young's interference fringes, *Ru* 55 (1994) 15
Density correction of photographic material for further image processing in electron microscopy, *Völkl, Lenz, Fu and Lichte* 55 (1994) 75

Inelastic electron scattering theory
Image formation by inelastically scattered electrons in TEM and STEM, *Fujimoto, Mazel and Sévely* 55 (1994) 253
Interaction delocalization in characteristic X-ray emission from light elements, *Allen, Josefsson and Rossouw* 55 (1994) 258

Instrument control and alignment
Digital analysis of Young's interference fringes, *Ru* 55 (1994) 15
Coma-free alignment of a high-resolution electron microscope with three-fold astigmatism, *Ishizuka* 55 (1994) 407
Three-fold astigmatism in high-resolution transmission electron microscopy, *Krivanek* 55 (1994) 419

Low energy electron microscopy and diffraction (LEEM and LEED)
Contrast and radiation damage in point-projection electron imaging of purple membrane at 100 V, *Spence, Qian and Zhang* 55 (1994) 19

Microscopic methods, specifically for biological specimens
Electron diffraction of helical particles, *Ruiz, Ranck, Diaz-Avalos, Caspar and DeRosier* 55 (1994) 383

Microscopic methods, specifically for solid interfaces and multilayers
Reflection electron microscopy of buried interfaces in the transmission geometry, *Spence* 55 (1994) 293

Microscopic methods, specifically for surfaces
Bloch-wave analysis of periodic surface contrast in zone-axis images, *Goodman, Matheson and Dong* 55 (1994) 314
Surface relaxation of strained heterostructures revealed by Bragg line splitting in LACBED patterns, *Chou, Anderson, Cockayne, Sikorski and Vaughan* 55 (1994) 334

Particle optics
Simulation of a Wien filter as beam separator in a low energy electron microscope, *Tsuno* 55 (1994) 127

Radiation effects (experimental)
Contrast and radiation damage in point-projection electron imaging of purple membrane at 100 V, *Spence, Qian and Zhang* 55 (1994) 19

Reflection electron microscopy (REM) and reflection high energy electron diffraction (RHEED)
Electron channelling effects at high incident angles in convergent beam reflection high energy electron diffraction, *Wang and Cowley* 55 (1994) 228
The effect of a non-Hermitian crystal potential on the scattering matrix in reflection electron diffraction, *Smith and Josefsson* 55 (1994) 247

Comparison of calculated and experimental convergent-beam RHEED patterns from MgO(100), *Lordi, Ma and Eades* 55 (1994) 284
Reflection electron microscopy of buried interfaces in the transmission geometry, *Spence* 55 (1994) 293
Study of twinning with reflection electron microscopy (REM), *Hsu and Cowley* 55 (1994) 302
The alloying effect of Ag on the reconstruction in Au(111) and (100) surfaces observed by REM, *Uchida, Wang and Zeitler* 55 (1994) 308
Origin of phase shift phenomena in RHEED intensity oscillation curves, *Horio and Ichimiya* 55 (1994) 321

Scanning electron microscopy (SEM)
Deconvolution method to obtain composition profiles from SEM backscattered electron signal profiles for bulk specimens, *Konkol, Wilshaw and Booker* 55 (1994) 183

Scanning transmission electron microscopy (STEM)
Theory and computation for imaging in scanning transmission microscopy considering partial coherence in illumination, *Gong* 55 (1994) 373

Scanning tunneling microscopy (STM)
Tip-induced displacement and imaging of a multilayered bacterial structure by scanning tunneling microscopy, *Firtel, Xu, Southam, Mulhern, Blackford, Jericho and Beveridge* 55 (1994) 113

Specimen preparation and handling
Specimen flatness of glucose-embedded biological materials for electron crystallography is affected significantly by the choice of carbon evaporation stock, *Han, Wolf, Vonck and Glaeser* 55 (1994) 1
A simple preparation method of air-sensitive specimens for transmission electron microscopy demonstrated by Rb_6C_{60}, *Zhang, Zhang, Bernaerts, Van Tendeloo, Amelinckx, Van Landuyt and Werner* 55 (1994) 25
High-resolution electron microscopy of biological specimens in cubic ice, *Cyrklaff and Kühlbrandt* 55 (1994) 141

Three-dimensional reconstruction and stereo microscopy
Stereoscopy by tilted illumination in transmission electron microscopy, *Fan and Ellisman* 55 (1994) 155
3D reconstruction by combining data from sections cut oblique to different unit cell axes, *Winkler and Taylor* 55 (1994) 357

X-ray microanalysis
Characterization of an analytical electron microscope with a NiO test specimen, *Egerton and Cheng* 55 (1994) 43
Interaction delocalization in characteristic X-ray emission from light elements, *Allen, Josefsson and Rossouw* 55 (1994) 258
